

PRODUCT

SENSOR BASIN FAUCET

SHFFEF005

DESCRIPTION

This Sensor Basin Faucet operates on a hands-free infrared sensor with a matte finish and a straight spout on a single-hole deck mount. With a 5-inch spout height and a flow rate of 0.5 GPM, it is built for hotel public restrooms, hospitality lobby washrooms, and high-traffic commercial bathroom facilities where touchless operation and water efficiency are the primary requirements.

SPECIFICATIONS

Touchless faucet operation in a hotel public restroom is not a luxury feature - it is a practical hygiene standard that reduces surface contact on one of the most frequently touched fixtures in a high-traffic commercial bathroom. The sensor on this faucet activates within a consistent response range and shuts off immediately when the hands are removed, which eliminates the water waste that a lever faucet accumulates over hundreds of daily uses in a busy hospitality restroom. The matte finish is practical for a public bathroom setting where the faucet is handled by every guest who uses the room and the single-hole deck mount fits standard commercial washroom basin configurations. The 0.5 GPM flow rate meets the water efficiency standards required in commercial hospitality facilities.

Key Features:

- Hands-free infrared sensor operation
- Matte finish
- Straight spout
- Single-hole deck mount
- 5-inch spout height
- 4-inch spout reach
- Flow rate: 0.5 GPM
- Designed for hotel public restrooms and high-traffic hospitality lobby washrooms
- Sensor activates within consistent range and shuts off immediately on hand removal
- 0.5 GPM flow rate meets commercial water efficiency requirements

Working well in hotel public restrooms, hospitality lobby washrooms, and high-traffic commercial bathroom facilities, the Sensor Basin Faucet addresses the hygiene and water efficiency requirements of a public commercial bathroom in a single fixture. The touchless operation removes surface contact from the water activation point and the 0.5 GPM flow rate reduces water use across hundreds of daily activations in a busy hospitality restroom. For hotel properties that manage high-traffic public bathroom facilities and want their faucet specification to reflect both hygiene standards and water efficiency requirements, this sensor faucet delivers on both consistently.
