PRODUCT

INVERTED BOWL CEILING LIGHT

SHFFELHL007

DESCRIPTION

This Inverted Bowl Ceiling Light mounts to the ceiling on a decorative hardware bracket with a brushed nickel finish and a frosted glass bowl that opens upward toward the ceiling, directing light upward to reflect off the ceiling surface and downward through the open bowl rim into the room below. At 13 inches in diameter, it suits traditional hotel entrance ceiling positions, classic hospitality corridor feature lighting, and heritage property hallway ceiling installations where an upward-opening bowl ceiling light delivers a warm, reflective light quality in a corridor or entrance space that a downward-directed dome or disc does not produce.
